THE FUTURE OF SKIN REJUVENATION

The ADVATx Dual Wavelength Laser is CE and FDA approved for a variety of indications, including Skin Rejuvenation*, Acne, Scars, and Vascular Abnormalities.

The ADVATx laser utilises the synergistic effect of two wavelengths, 589 nm and 1319 nm, combined with the Soft Pulsing technique, which optimises the treatment experience and clinical results with no social downtime.

As one of the world's most advanced dermatology lasers, the ADVATx is designed and manufactured by Advalight, a globally renowned company based in Denmark and founded in 2006.

*CE approved
